DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement filed 04/23/04 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information struck-through therein has not been considered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 13-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Franconi et al. (U.S. Pat. 5,186,181 hereinafter "Franconi").

4. Regarding claims 13-18, 20-22, Franconi discloses a radio frequency thermotherapy device containing two or more coils one being the primary and one being the proximate secondary (Col. 29, ll. 23-26), connected to a power supply (Col. 29, ll. 41-49), and a means tuning the RF fields established by the windings that can be located in an external housing (Col. 29, ll. 23-26 & 41-49). Franconi further discloses that the tuning means can be a tuning capacitor or other tuning means that balances the power source to the external load (Col. 20, ll. 37-44; Col. 29, ll. 47-49). Franconi also

discloses that the tuning is optimized for each coil to provide therapeutic support based on tissue size, shape, and depth (Col. 8, ll. 33-37).

5. In regards to claim 19, Franconi discloses that differentiating the number of turns of the coils, changes the energy transfer of the coils (Col. 24, ll. 33-35).

6. Examiner notes that a balun is a device for converting a balanced source to an unbalanced source. (Dictionary.com Unabridged (v 1.0.1) Based on the Random House Unabridged Dictionary, © Random House, Inc. 2006.) The tuning capacitors or other tuning means that balance the power source to the external load fall under this limitation.
